

Instructions for Use for iOS and Android Devices

Yettel.

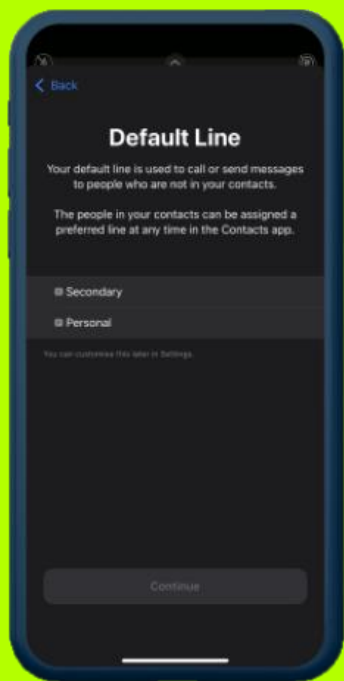

1. Make sure your device is connected to the internet - either via mobile data and through roaming (if you don't have a Bulgarian number) or Wi-Fi.
2. Open the camera app on your phone to scan the QR code.
3. Once the code is recognized, tap "Add Mobile Plan" to begin installing the eSIM.

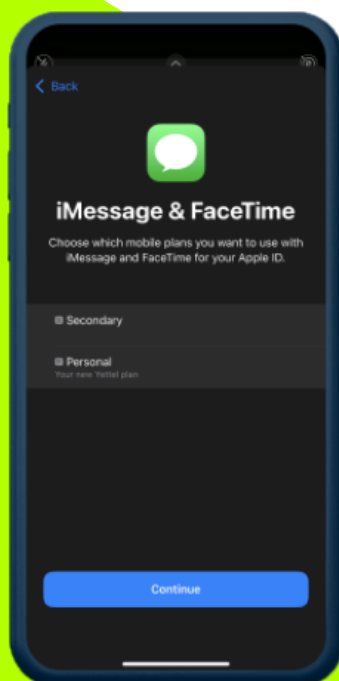

Tap the Continue button to install the eSIM and connect to the network.

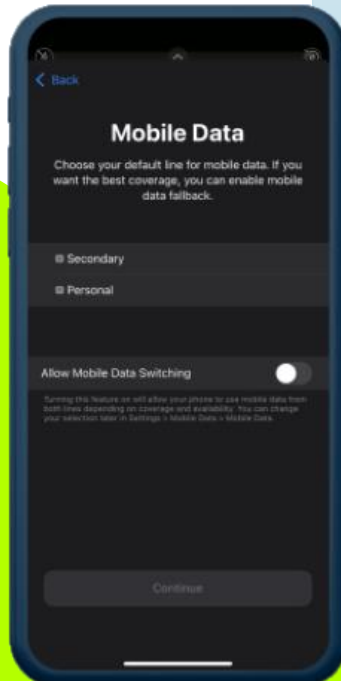

When the eSIM is not the primary SIM card:

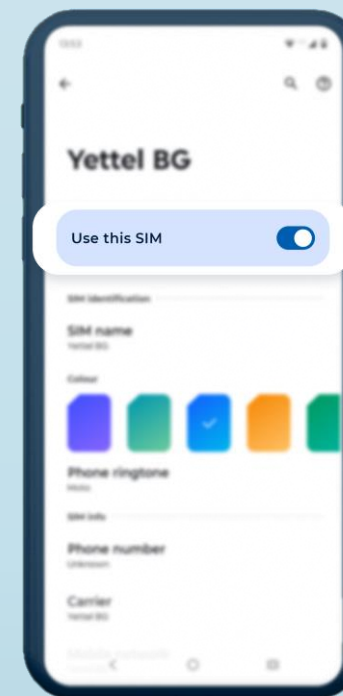

Select the primary number you want to use for outgoing and incoming calls.

Select the primary number you want to use for iMessage and FaceTime services.

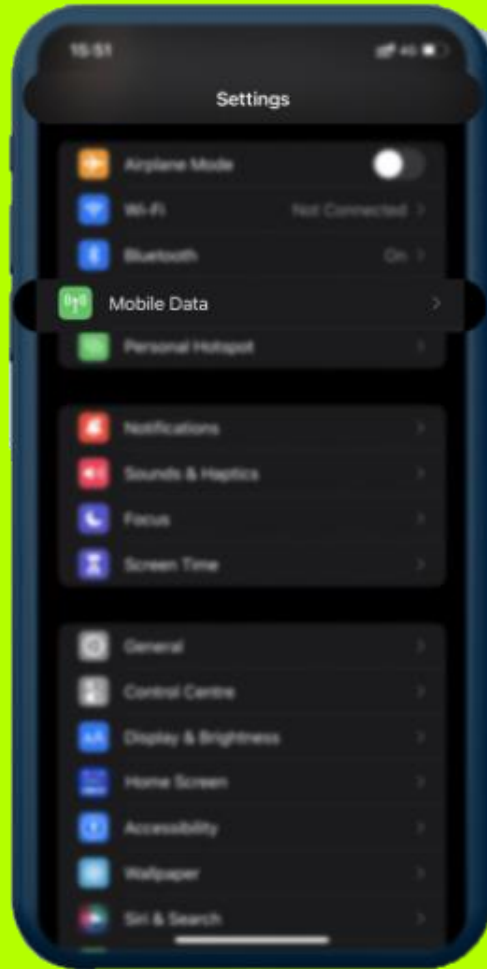

Select the primary number you want to use for mobile data.

From the “SIM Manager,” you can select your preferred SIM for incoming and outgoing calls, messages, and mobile data.

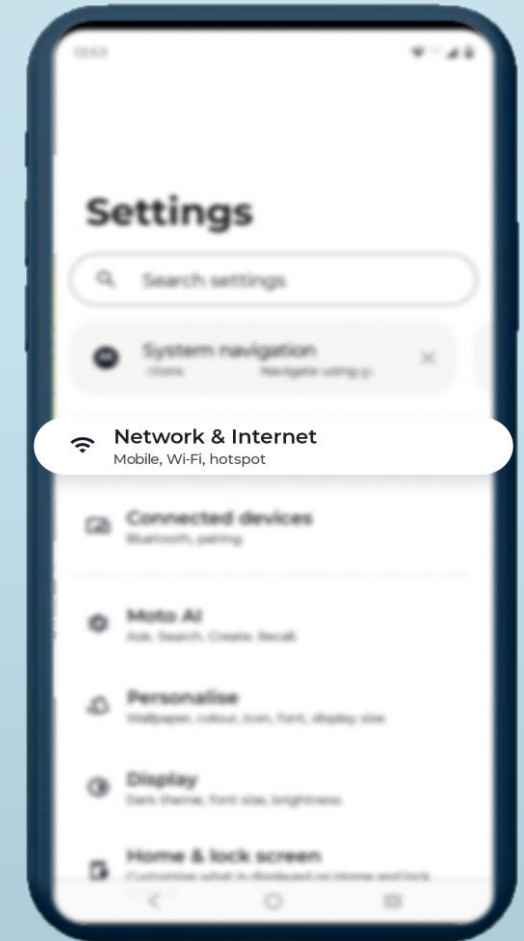

Management: How to Remove an eSIM from Your Device?

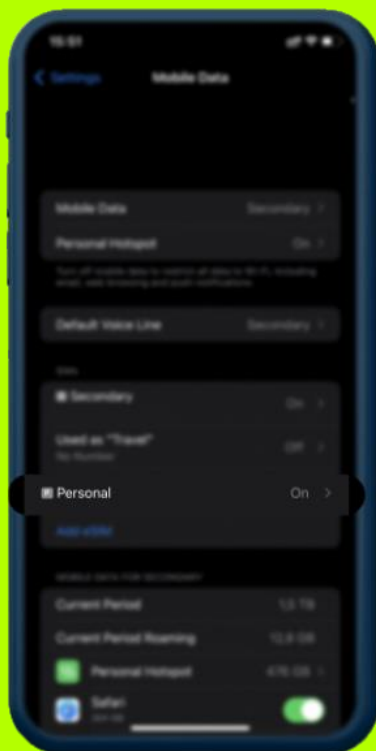

To remove an eSIM from your device, make sure it's connected to the internet — either via mobile data (from another SIM and through roaming, if you're still outside your country of residence) or Wi-Fi.

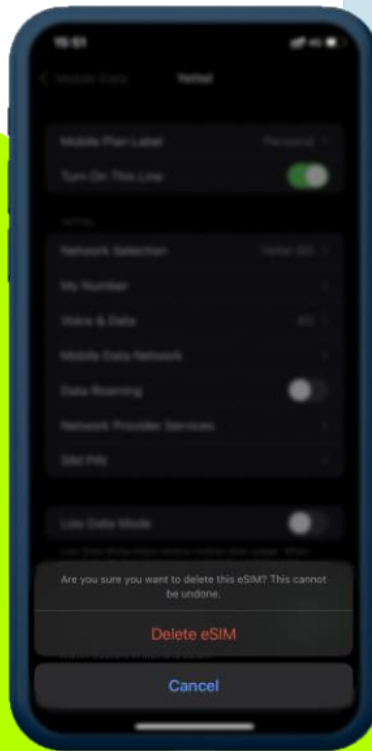

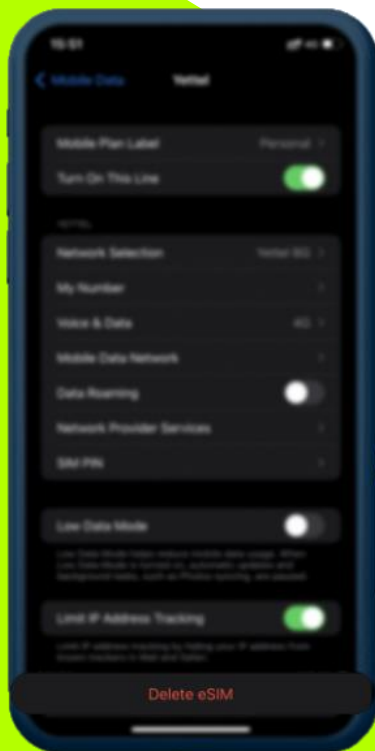

From the main Settings menu, open the option for managing mobile plans / mobile data.

Select the eSIM profile you want to remove and confirm the deletion.

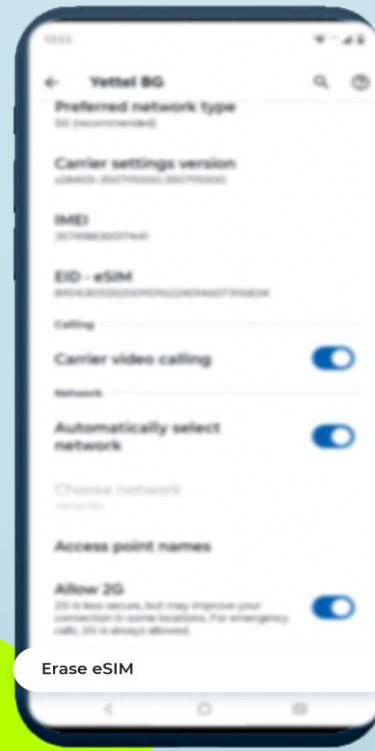

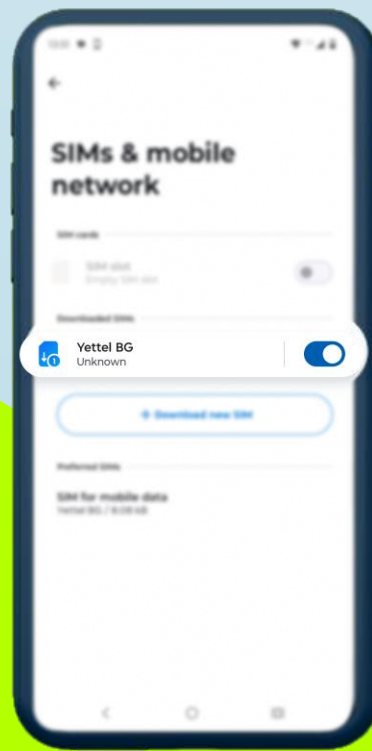

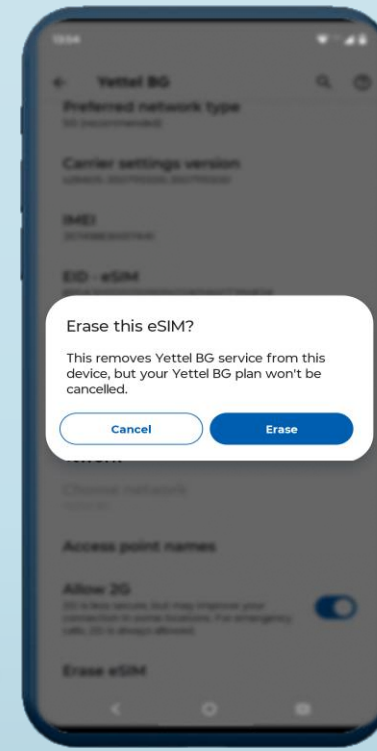

Select the primary number you want to use for outgoing and incoming calls.

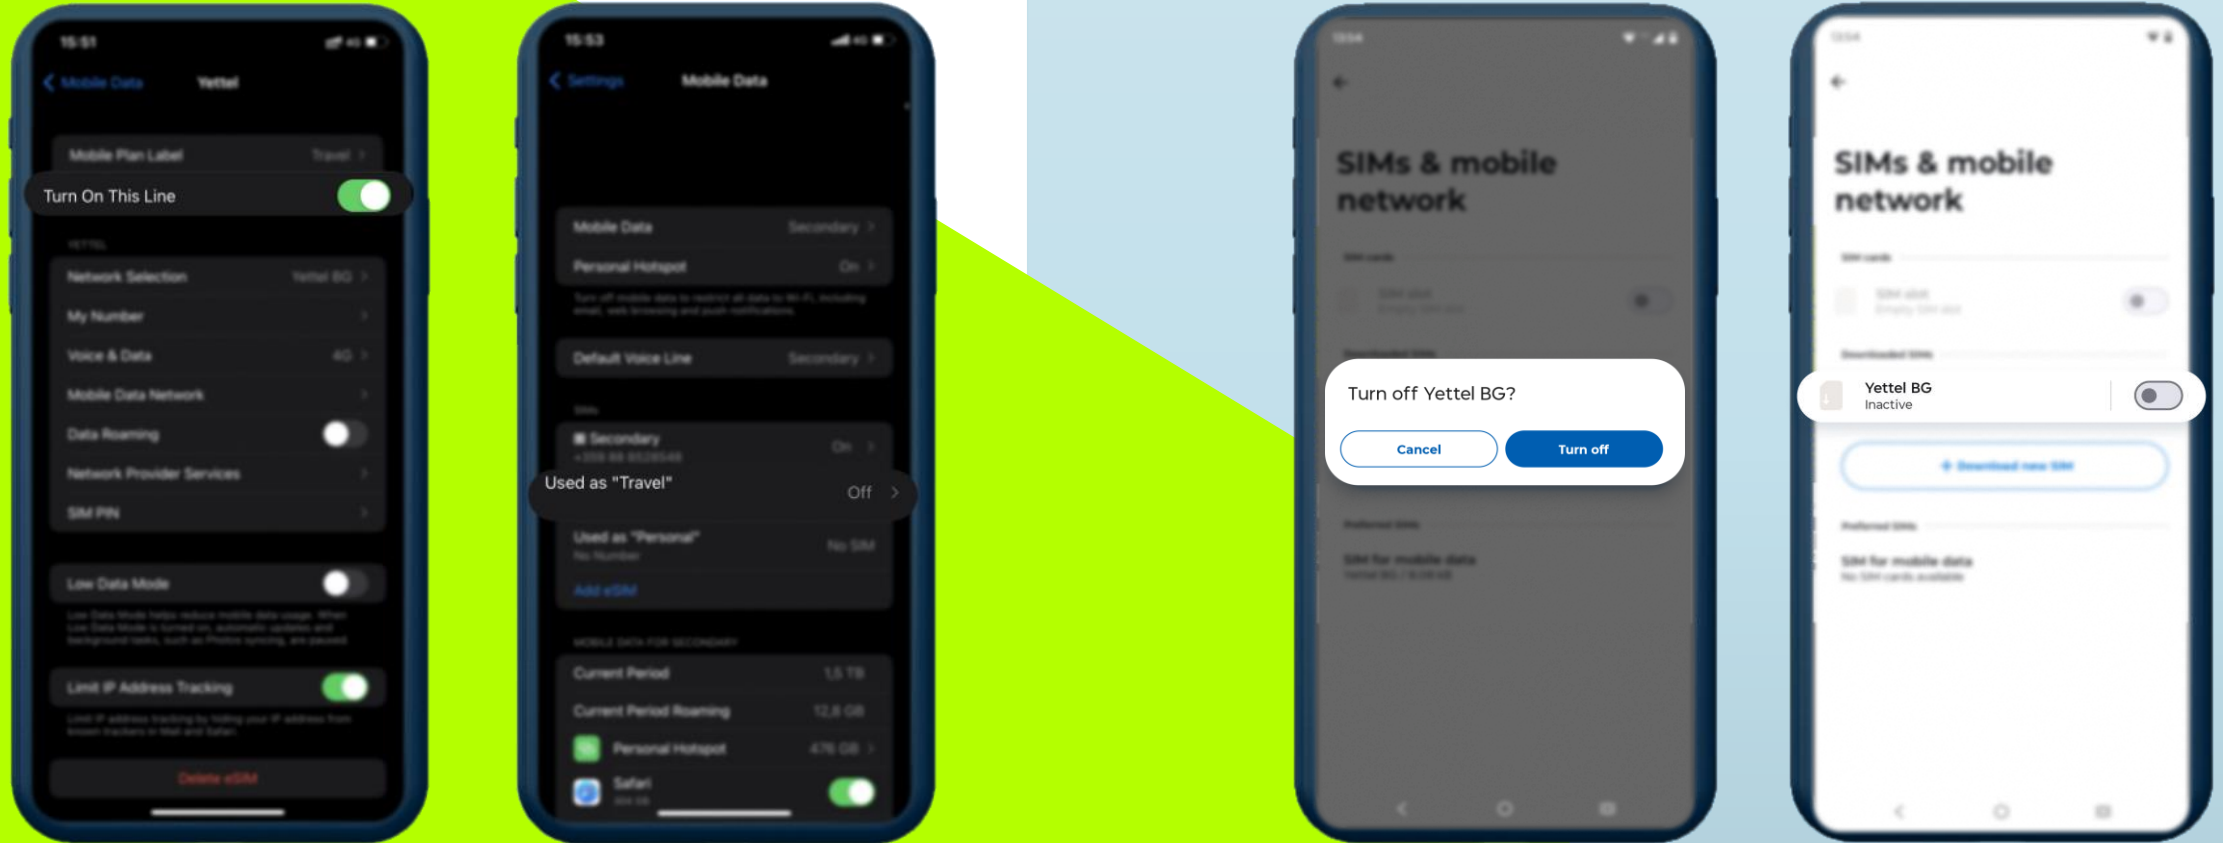

Tap the Delete eSIM button.

Confirm the deletion.

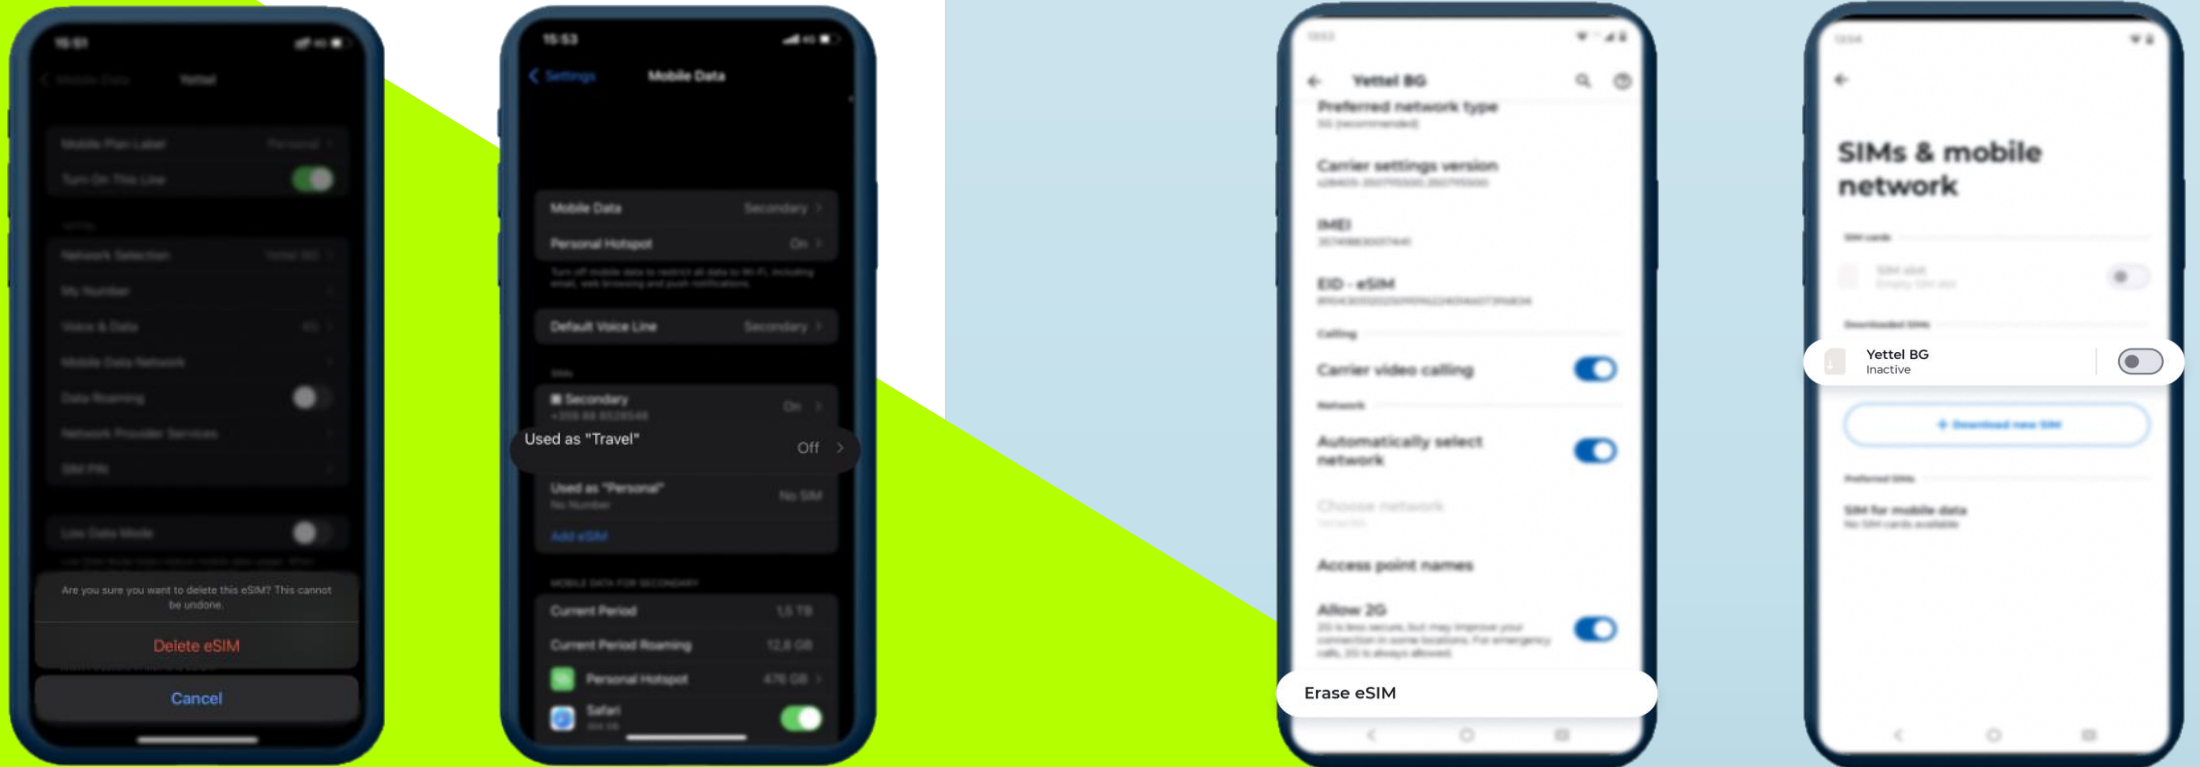

Management: How to Disable an eSIM Without Removing It from the Device?

Make sure your device is connected to the internet - either via mobile data (from another SIM and through roaming, if you're still outside your country of residence) or Wi-Fi. Select the eSIM you want to disable and tap the displayed option.

In the mobile data menu, you should now see that the eSIM remains on the device but is marked as “disabled” instead of “active” or “removed.”

Transfer: How to Move an eSIM from One Phone to Another

On the old device, make sure it is connected to Wi-Fi (do not use mobile data).

Open the mobile data / mobile plans settings and select the eSIM profile you want to transfer. Delete the eSIM from the old device and confirm the action.

On the new device, open the mobile data / mobile plans settings and select “Add eSIM” (or “Add Mobile Plan”).

Scan the original QR code you received with your purchase.

Once activated, the eSIM will be active on the new device, and the old device will show the status “removed” or “inactive.”
